

ETL PRACTICAL NO 5

@relation student_etl_missing

@attribute Student_ID numeric

@attribute Name string

@attribute Department {CS,IT,EXTC,MECH}

@attribute Attendance numeric

@attribute Marks numeric

@attribute Result {Pass,Fail}

@data

101,'Amit',CS,85,78,Pass

102,'Neha',IT,90,88,Pass

103,'Rahul',EXTC,?,45,Fail

104,'Sneha',CS,72,?,Pass

105,'Karan',MECH,55,40,Fail

106,'Pooja',IT,95,92,Pass

107,'Rohan',?,60,50,Pass

108,'Anjali',EXTC,45,35,?

109,'Vikas',MECH,?,66,Pass

110,'Priya',IT,88,81,Pass

How to Use in WEKA

Step 1:

Open WEKA

Step 2:

Click:

Explorer

Step 3:

Click:

Open File

Step 4:

Select:

student_etl.arff

ETL Operations You Can Demonstrate

Operation Purpose

Extract Load dataset into WEKA

Transform Apply filters/preprocessing

Load Save processed dataset

Useful Filters for Practical

Remove Attribute

Filter → Unsupervised → Attribute → Remove

Used to remove unwanted columns.

Normalize Data

Filter → Unsupervised → Attribute → Normalize

Scales numeric values.

Replace Missing Values

Filter → Unsupervised → Attribute → ReplaceMissingValues

Handles missing data.

Expected Output

After loading:

- WEKA displays attributes
- Histograms appear
- Data preprocessing can be applied
