

Complete Anaconda Practical Guide (.py and .ipynb)

This guide explains step-by-step how to run Python (.py) files and Jupyter Notebook (.ipynb) files using Anaconda for practical exams.

1. Open Anaconda

- Press the Windows key.
- Search for 'Anaconda Navigator'.
- Open Anaconda Navigator.

2. Run .ipynb Files (Jupyter Notebook)

- Open Anaconda Navigator.
- Click 'Launch' under Jupyter Notebook.
- Navigate to the folder containing your .ipynb file.
- Open the notebook.
- Run a cell using Shift + Enter.
- Run the full notebook using Cell → Run All.

3. Run .py Files Using Spyder

- Open Anaconda Navigator.
- Click 'Launch' under Spyder.
- Open your .py file using File → Open.
- Run the file using F5 or the Run button.

4. Run .py Files Using Anaconda Prompt

- Open Anaconda Prompt.
- Navigate to your folder using the cd command.
- Run the file using: python filename.py

5. Install Missing Libraries

- Use pip install numpy matplotlib pandas
- OR use conda install numpy matplotlib pandas

6. Important Tips

- Use `plt.show()` for graph display.
- Keep all files in one folder.
- Use simple file names.
- Test all files before the practical exam.

7. Common Errors and Solutions

- `ModuleNotFoundError` → Install the missing package.
- Graph not showing → Add `plt.show()`.
- Kernel busy → Restart the Jupyter kernel.
- Python not found → Open programs through Anaconda.

8. Important Shortcut Keys

Shortcut	Function
Shift + Enter	Run notebook cell
F5	Run Spyder file
Ctrl + S	Save file
Ctrl + C	Stop execution
Esc + A	Add cell above
Esc + B	Add cell below

Final Recommended Flow:

For `.ipynb` files: Anaconda Navigator → Jupyter Notebook → Open File → Run All

For `.py` files: Anaconda Navigator → Spyder → Open File → Press F5
